Seaborn in Python

1. What is Seaborn?

→ Seaborn is a Python library used to create attractive and informative statistical graphs.

- Built on top of Matplotlib
- Commonly used with Pandas & Numpy
- Helps visualize and understand data easily.

2. Import Seaborn

Python

```
import seaborn as sns
import matplotlib.pyplot as plt.
```

sns is the common short name of seaborn
plt is the commonly used for displaying and customizing charts.

3. Seaborn with Pandas

Seaborn works with Pandas Dataframes to visualize data.

Date

4. Types of Seaborn Charts.

Chart	Use
sns.scatterplot()	Show relationship between values
sns.lineplot()	Show trends over time
sns.barplot()	Compare categories
sns.histplot()	Show data distribution
sns.boxplot()	Show spread and outliers
sns.heatmap()	Show values using colors.
sns.countplot()	Count categories.

5. Important Seaborn Functions.

Function	Purpose
sns.set_theme()	Set chart appearance
sns.scatterplot()	Create scatter plot
sns.lineplot()	Create line chart
sns.barplot()	Create bar chart
sns.histplot()	Create histogram
sns.heatmap()	Create heatmap.

Seaborn uses matplotlib underneath so you can use both libraries together.

6. Advantages of Seaborn.

1. Easy to create statistical graphs.
2. Attractive default appearance.
3. Works well with Pandas.
4. Supports data analysis and visualization.
5. Marks complex relationships easier to understand.

7. Quick Revision.

Seaborn :- Python ~~lab~~ library for statistical data visulation.

Import: import seaborn as sns.
Built on: Matplotlib
Works with :- Pandas and Numpy.
Common Charts:- Bar, line, scatter
histogram and heatmap

Seaborn is useful when you want to explore data and understand patterns through graphs.
